MIG MEMBERS TO BE FEATURED IN GLOBALPRESS ELECTRONIC SUMMIT PANEL

March 30, 2009 | Kabuki Hotel | San Francisco, CA

The annual Globalpress Electronics Summit allows C-level electronics executives --without having to travel abroad -- to communicate with millions of design engineers and managers who read European and Asian trade and business publications. Every year, outlets such as Electronic Engineering & Product World, EDN China, EE Times Europe, Electronics Weekly, and Markt & Technik generate hundreds of articles as a result of the summit's presentations, panel discussions and networking events. About a dozen members of the U.S. media also attend the summit.

Panelists will discuss the growth opportunities in MEMS such as: who will give the Energy Boost to the growing MEMS Industry? The small micro machines are gaining steam and recognition. Applications in automotive, biotech, consumer products, industrial, medical, mobile phones and devices and many other areas are promising long-term growth and profits. What breed of applications and new devices will energize demand and generate growth into this next, leaner and possibly meaner decade? Will it be consumer driven and focus on automotive, communication devices, music, laptops or game consoles? Or should it be industrial with sensors, semiconductor test equipment and research equipment. Or maybe biotech /medical with its monitoring, sensing and delivery devices? This panel of industry insiders from different market segments will share their opinion where the MEMS industry will grow, investments and profits be made.

WHERE IS THE GROWTH IN MEMS?

Moderator: Patrick Mannion, Chief Editor, TechOnline

Panelists:

Analog Devices - Mark Martin, VP & GM

Maxim - Albert Bergemont, Vice President TR&D

Microvision - Ian Brown, VP Sales & Marketing

VTI Technologies - Scott Smyser, VP & GM

Kionix - Eric Eisenhut, VP Sales and Marketing
