

Evaluation Board Mating Connector

Kionix recognizes the fact that engineers developing applications sometimes need to explore different options in order to settle on the optimal solution. To facilitate this exploration, an evaluation board is an efficient technique for testing different accelerometer solutions. All Kionix accelerometer evaluation boards use the same 14-pin header, so a common mating connector can be used for all products. To aid our customers in their accelerometer evaluation, Kionix is offering the name of a retailer and the part number for the mating connector we recommend for evaluation board interfacing.

Retailer: Digi-Key Corporation

Digi-Key Part Number: AKC14H-ND

Digi-Key Mating Connector Website Link:
